Die Expansion von GTV auf internationalen Märkten ist ein hervorragendes Beispiel dafür, wie sich eine Marke mit lokalen Wurzeln zu einem globalen Player entwickeln kann. Die Ausweitung auf Auslandsmärkte war nicht nur eine Frage der Umsatzsteigerung, sondern vor allem eine Antwort auf die steigende Nachfrage von Kunden und Geschäftspartnern aus verschiedenen Teilen der Welt. Hier sind einige Schlüsselmomente und Strategien, die es GTV ermöglicht haben, internationale Anerkennung zu erlangen. Die ersten Schritte auf ausländischen Märkten unternahm GTV in den Jahren 2000–2005, als man begann, europäische Märkte zu erschließen. Dank der Produktqualität und der passenden Marketingstrategie gewann die Marke schnell Anerkennung in den Nachbarländern. Die Jahre 2006–2015 waren eine Zeit dynamischer Entwicklung von GTV in Europa. Die Marke trat systematisch in neue Märkte ein und baute ein Netzwerk von Distributoren und Geschäftspartnern auf. Ein entscheidender Moment war die Eröffnung von Niederlassungen in Kroatien (2016), Tschechien (2017) und Spanien (2018). Diese strategischen Entscheidungen ermöglichten eine stärkere Präsenz der Marke in wachstumsstarken Regionen.

La période de 2006 à 2015 a marqué une croissance dynamique de GTV en Europe. - Die Anzahl der eingesetzten Scharniere hängt von der Höhe, Breite und dem Gewicht der Frontplatte ab.
- Um die Stabilität zu gewährleisten, soll der Abstand zwischen den Scharnieren so groß wie möglich sein.
- Führen Sie vor der Serienproduktion einen Montagetest durch und überprüfen Sie die richtige Funktion.
- Le nombre de charnières utilisées dépend de la hauteur, de la largeur et du poids du panneau avant.
- Afin d'assurer la stabilité, la distance entre les charnières doit être aussi grande que possible.
- Avant la production en série, effectuer un test d'assemblage et vérifier son bon fonctionnement.
- El número de bisagras utilizadas depende de la altura, anchura y peso del frente.
- Para garantizar la estabilidad, la distancia entre las bisagras debe ser lo más grande posible.
- Antes de la producción en serie, se realiza una prueba de montaje y se comprueba que funciona correctamente.
- Numărul de balamale care ar trebui utilizate, depinde de înălțimea, lățimea și greutatea frontului.
- Pentru a asigura stabilitatea, distanța dintre balamale ar trebui să fie cât mai mare posibil.
- Înainte de a începe producția în serie, trebuie efectuate teste de montare pentru a asigura o funcționare corectă.

0	Kein Schutz Aucun Falta niciunul	Den Schutz gegen elektrischen Schlag bildet die Grundisolierung. Bei Beschädigung der Isolierung sollte der Berührungsschutz durch geeignete günstige Umweltbedingungen und die Platzierung des Geräts außerhalb des direkten Kontakts gewährleistet werden. La protection contre les chocs électriques est assurée par l'isolation de base. En cas d'endommagement de l'isolation, la protection contre les chocs électriques doit garantir des conditions environnementales appropriées et que l'appareil soit en dehors d'un contact direct. La protección contra descargas eléctricas se proporciona mediante aislamiento básico.En caso de daños en el aislamiento, la protección contra descargas eléctricas garantizará unas condiciones ambientales adecuadas y la ubicación del dispositivo fuera del contacto directo. Protecția împotriva șocurilor electrice se bazează numai pe izolația de bază. În cazul unei defecțiuni a izolației, protecția împotriva șocurilor electrice trebuie să fie asigurată prin condiții de mediu adecvate și prin amplasarea echipamentului dincolo de atingerea contactului direct.
I		Bei Geräten der Schutzklasse I wird die Sicherheit durch die Verbindung aller aktiven Leiterelemente mit dem Schutzleiter oder direkt mit der Erdung sichergestellt. Pour les équipements de la 1re classe de protection, la sécurité est garantie par la connexion de tous les éléments conducteurs avec le conducteur de protection ou directement avec la mise à la terre. En los dispositivos con clase de protección I, la seguridad se garantiza conectando todos los elementos conductores activos al conductor de protección o directamente a tierra. Echipamentele de clasa I oferă protecție prin conectarea tuturor părților conductoare sub tensiune la un fir de protecție sau direct la pământ.
II		Bei Geräten der Schutzklasse II wird die Sicherheit durch den Einsatz von doppelter oder verstärkter Isolierung, die bei gegebenen Umweltbedingungen und der Nennspannung als durchschlagfest angesehen werden, sichergestellt. Pour les équipements de la IIe classe de protection, la sécurité est assurée grâce à une double isolation ou une isolation renforcée, qui dans les conditions environnementales données et pour la tension nominale ne claquent pas. En los dispositivos con clase de seguridad II, la seguridad está garantizada por el uso de aislamiento doble o reforzado, que se considera insuperable en las condiciones ambientales dadas y a la tensión nominal. Echipamentele de clasa II asigură protecție prin utilizarea izolației duble sau consolidate, care este considerată rezistentă la defecțiuni în condiții de mediu date la tensiunea nominală.
III		Der Schutz gegen elektrischen Schlag bei Schutzeinrichtungen der Klasse III wird durch Absenken der Versorgungsspannung auf das unter den gegebenen Umweltbedingungen sichere Niveau gewährleistet. La protection contre choc électrique dans les équipements de IIIe classe de protection est garantie par la réduction de la tension d'alimentation jusqu'à la valeur sûre dans les conditions environnementales données. La protección contra descargas eléctricas en dispositivos de clase III se garantiza reduciendo la tensión de alimentación al valor seguro en las condiciones ambientales dadas. Protecția echipamentelor de clasa III împotriva șocurilor electrice este asigurată prin reducerea tensiunii de putere la o limită de siguranță în condiții de mediu date.
